

TCEC12: the 12th Top Chess Engine Championship

Guy Haworth and Nelson Hernandez¹
Reading, UK and Maryland, USA

After the successes of TCEC Season 11 (Haworth and Hernandez, 2018a), the Top Chess Engine Championship moved straight on to Season 12, starting April 18th 2018 with the same divisional structure if somewhat evolved.

Five divisions, each of eight engines, played two or more ‘DRR’ double round robin phases each, with promotions and relegations following. Classic tempi gradually lengthened and the Premier division’s top two engines played a 100-game match to determine the Grand Champion. The strategy for the selection of mandated openings was finessed from division to division. The revised TCEC engine line-up is illustrated and listed in Fig. 1 and Table 1.

Fig. 1. Logos for the TCEC 12 engines as in their original divisions.

Besides using FIDE’s 3x-repetition and 50-move drawing rules, TCEC terminated a game at move 40 or later if both engines had $|eval| < 0.05$ for ten consecutive plies in the current phase, i.e., since the last pawn-advance and/or capture. TCEC12 fell in line with most of the participating engines by adjudicating endgames using the Syzygy DTZ₅₀ EGTs rather than the Gaviota DTM EGTs which do not recognise the 50-move rule. 5-man EGTs were used for the divisions and 6-man EGTs were used

¹ Corresponding author: g.haworth@reading.ac.uk

for the Superfinal. Games which were apparently decisive were terminated by TCEC if both engines consistently agreed for the last eight plies that the evaluation is at least 6.5 or at most -6.5.

ELO ranged from 2714 to 3554, averaging 3143. Four new engines joined the fray this time:

LEELA CHESS ZERO, a new-architecture UCT/NN engine from a large community,
 RODENT by the Polish chess programmer Pawel Koziol,
 TUCANO by the Brazilian professional software developer/programmer Alcides Schulz, and
 XIPHOS by the Serbian mathematician and computer scientist Milos Tatarevic.

The formidable 44-core server of TCEC11 was used unchanged in TCEC12.

1 Division 4, two DRR phases, 28 rounds, 112 games, tempo 30'+10"/m

A principal focus was the participation of the exciting LEELA CHESS ZERO, a neural-network-architecture engine inspired by the innovations of Deep Mind's ALPHAZERO (Silver et al, 2017). The 14 most common two-move openings in the second author's CATOBASE (Hernandez, 2018) were allocated to rounds 1-7 and 15-21, and with colours reversed for rounds 8-14 and 22-28, see Table 2.

The results, as played, are as in Table 3 though a rule introduced in TCEC11 required that the participation of SCORPIO be scratched as it had three technical crashes. The seven connection breaks with the server were thought to be caused by deadlock conditions in the engine. These losses in fact made no difference to the final ranking on this occasion. LC0 did not in fact progress but will be greatly helped by GPU assistance in a future season. The generic statistical review of TCEC12 results and terminations is given for each phase of TCEC12 in Table 11.

Table 2. CATOBASE's most common two-move openings.

For division 4, all rounds have four games so game $r.n$ is game $4r-4+n$ in the pgn files (Haworth and Hernandez, 2018b) and the colour-flipped pairings of engines are 28 games apart. This division had 10.8% of its wins below the diagonal of the eventual x-table. ETHEREAL alone was much improved, undefeated and a strong first while XIPHOS kept RODENT III in a distant third place, beating it 4-0.

Table 3. The TCEC12 Division 4 cross-table: two DRR phases, 28 rounds, 112 games.

2 Division 3, two DRR phases, 28 rounds, 112 games, tempo 30'+10"/m

In this division, the same fourteen openings were mandated as for Division 4 and used in the same order. This time however, the colour-reversed game followed immediately rather than 28 games later, giving an earlier balanced view on the bilateral contests. Rounds were therefore of eight games rather than four and were numbered from 1 to 14.

Draws under the 50-move rule are very rare in TCEC, less than 1% of terminations. This is because most engines seem to monitor the ply-count, zero their evaluations as they see it reaching 100, and allow TCEC draw-adjudication to take its course. Game 13.1/97, CHESSBRAINVB-WASP, was however a 50m-rule draw: CHESSBRAINVB retained hopes of a win to the end, despite being a pawn down.

CHESSBRAINVB was a clear winner but the race for the second promotion-spot was close. XIPHOS pulled off its second promotion this season, despite having lost its head-to-head matches with fellow-candidates ETHEREAL and PEDONE. ETHEREAL more than justified its promotion to Division 3.

Table 4. The 14 two-move openings chosen for Division 3.

This time, FRITZ and TEXEL won promotion but the newly promoted XIPHOS and CHESSBRAINVB took the next two places. There were 10 technical crashes in the division, and both ARASAN and HANNIBAL were disqualified and relegated for disconnecting from the server: a pity as they had both scored wins against FRITZ. VAJOLET no doubt counted itself lucky to survive.

4 Division 1, two DRR phases, 28 rounds, 112 games, tempo 60'+10"/m

The normalised Sonneborn-Berger scores suggest that this was the most closely-contested division of TCEC12. Eventually, GINKGO and JONNY triumphed though FIZBO and BOOOT kept the result in doubt until almost the end. Thankfully, we did not see another rash of engine-disconnect fails, the one ultimately irrelevant incident being g8.8/64, FRITZ–JONNY. FRITZ as Black had beaten JONNY in their first, g1.7/7, encounter and hung on to its recent promotion: TEXEL did not.

Table 8. The TCEC12 Division 1 cross-table: two DRR phases, 28 rounds, 112 games.

#	Engine	ELO	Pts	DRR	SB	nSB	Gi	Jo	Fi	Bo	La	Fr	Gu	Te	Move
